Skills

- C#, .NET Core, .NET Framework, ASP.NET Core
- Angular, React, Blazor, TypeScript, Razor, Knockout.js
- RESTful APIs, SOAP, Entity Framework Core, NHibernate, Clean Architecture, DDD, SOLID, Microservices
- RabbitMQ, MassTransit, Pub/Sub, CQRS, MediatR, background workers
- SQL Server (optimization, indexing), MongoDB, Redis, Dapper
- AWS (ECS, EC2, S3, CloudFront, CloudWatch), Azure (App Service, Functions, Container Apps, Blob, CosmosDB), Docker
- CI/CD, Github Actions, Azure DevOps
- xUnit, Jasmine, Jest, SpecFlow, Moq, TDD, Unit & Integration Testing, OpenTelemetry, Prometheus, Grafana, Jaeger
- Claude Code, MCP, prompt engineering, spec-driven development
- Languages: Portuguese (native), English (advanced)

Experience

Senior Fullstack Engineer **Nstech** *Brazil (Remote)* **09/2025 - Current**

MultiCTe is a multi-tenant Transport Management System (TMS) covering the full logistics workflow: order management, document generation, routing, freight, real-time fleet monitoring, and event-driven control tower operations.

- Develop and maintain features across a large multi-module product with .NET Framework 4.7 and .NET 6/7/8 coexisting, on a DDD foundation applying SOLID, Repository and Unit of Work.
- Build control tower business rules: geolocation alerts, route radius configuration, pickup and delivery events, vehicle tracking integrations, backed by asynchronous processing with background workers, threads, and event generation for real-time monitoring routines
- Build and maintain integrations with external services through REST APIs and SOAP web services, handling authentication, contracts, XML/JSON parsing, and service unavailability
- Investigate critical production incidents down to root cause using logs, timestamps, GPS data, and SQL Server analysis; delivered tax reform compliance adjustments under regulatory deadline
- Handle fixes across multiple release lines running in production simultaneously, with merges, backports, and cherry-picks between versions and customers
- Take part in the ongoing modernization of the platform: contributed to a broad dependency injection refactoring of legacy service classes, the split into macro-services with an API gateway, and the migration from MSMQ to RabbitMQ-based messaging;
- Use Claude Code with Serena MCP for semantic C# navigation in daily refactoring, code review, and test case generation

Tech: C#, .NET 6/7/8, .NET Framework 4.7, SQL Server, NHibernate, Dapper, Redis, Razor, Knockout.js, jQuery, RabbitMQ, Pub/Sub, Docker, Azure, GitHub Actions, xUnit, OpenTelemetry, Prometheus, Grafana, Claude Code

Senior Fullstack Engineer **iUUL** *Brazil (Remote)* **09/2024 - 09/2025**

iUUL runs a software residency program training junior developers while delivering production client projects across multiple stacks.

- Provided technical mentorship in backend (C#) and frontend (Angular); led code reviews focused on quality and clarity; resolved technical blockers and production bugs
- Implemented automated test layer for recruitment platform, reaching 92% test coverage; defined architecture using Clean Architecture, DDD, and modularization with tech lead
- Diagnosed and rebuilt CI/CD pipelines that broke without visible symptoms; delivered staging and production environments, version tagging, and artifact management

Tech: C#, .NET 8, Angular, PrimeNG, React, MongoDB, AWS, Azure, xUnit, Moq, Jest, Jasmine

Mid-Level Fullstack Engineer **JJ4Tech** *Brazil (Remote)* **06/2022 - 02/2024**

JJ4Tech is an instant payments fintech integrated with FedNow (Federal Reserve), built on asynchronous messaging and event-driven architecture following ISO 20022 standard.

- *Developed .NET 7 microservices with Clean Architecture and DDD, applying tactical patterns (Value Objects, aggregates, domain events) published and consumed through Pub/Sub across services*
- *Built the asynchronous messaging layer with MassTransit over RabbitMQ and IBM MQ on the Federal Reserve channel; implemented idempotency, retry policies, saga orchestration, and CQRS with MediatR*
- *Proposed and implemented the unit test suite, cutting bug-related tasks by 60%+ in the first month; instrumented services with Grafana dashboards over Prometheus and OpenTelemetry, with distributed tracing in Jaeger*

Tech: C#, .NET 7,SQL Server, RabbitMQ, MassTransit, IBM MQ, MediatR, SpecFlow, Angular 14, Jasmine, AWS, OpenTelemetry, Prometheus, Grafana, Jaeger, xUnit

Junior Fullstack Engineer **Singia** *Brazil (Remote)* **01/2021 - 05/2022**

Fintech providing core technology for financial institutions. Worked on a multi-tenant pension management system handling loan and investment features.

- Refactored a dynamic pension calculation screen, moving logic out of the database into a RESTful API with clean separation of concerns; improved load time by ~23%
- Worked across .NET Framework and .NET Core modules, optimizing SQL Server queries and stored procedures and adding unit tests for critical loan calculation logic

Tech: C#, .NET Framework 4.7, .NET 5/6, Angular 11, React 17, SQL Server, xUnit, Jasmine, Entity Framework

Intern Fullstack Engineer **Itaú** *Rio de Janeiro, BR (On-site)* **01/2019 - 12/2020**

Worked in the private pension investment portfolio area of Latin America's largest bank.

- Developed and maintained private pension banking applications on C#, .NET Framework 4.x, Angular and Knockout.js; optimized SQL Server queries, stored procedures, and indexes supporting financial calculations.

Tech: C#, .NET Framework 4.x, Angular, Knockout.js, SQL Server

Education

- **Bachelor's Degree in Information Systems** at Universidade Federal do Estado do Rio de Janeiro, UNIRIO - (07/2025)

Certifications

- **Cambridge Assessment English, C1 Level Certificate -** (01/2018)
